## KINETICS AND MECHANISM-OF-ACTION

Effect of Di-n-pentyl phthalate (DNPP; 40 μM) on association rate, dissociation rate and saturation binding of the cannabinoid ligand [<sup>125</sup>I]AM251 in rat brain. The enhanced dissociation rate and lowered B<sub>max</sub> for [<sup>125</sup>I]AM251 binding in the presence of the inhibitor is consistent with an allosteric binding site for DNPP on the CB<sub>1</sub> receptor:
